

Vova Antoniv – Technical Rider

Stage Setup

- Output: 2 × XLR (stereo L/R) from my mixer.
- I perform standing; the stage setup should accommodate this.
- Preferred stage space: 3m × 3m minimum.
- Table (approx. 3m × 1m) at DJ booth height (90–100 cm).

Sound & Monitoring

- Full-range PA system with subwoofers.
- 1 × stage monitor positioned next to my setup.

Power Requirements

- 1 × standard 230V power outlet near my position on stage.

Setup & Soundcheck

- Please allow at least 1 hour for setup and soundcheck before the performance.

Additional Requirements

- Access to drinking water near the stage.

The performance contains both very quiet and bass-heavy moments.

If you have any questions regarding my setup, feel free to reach out – I'm flexible and can adapt to different stage conditions.
